

INTEGRASI NUMERIK

Prodi D4 Teknik Informatika
JTI Politeknik Negeri Malang

INTEGRASI NUMERIK

- Di dalam kalkulus, terdapat dua hal penting yaitu integral dan turunan(derivative)
- Pengintegralan numerik merupakan alat atau cara yang digunakan oleh ilmuwan untuk memperoleh jawaban hampiran (aproksimasi) dari pengintegralan yang tidak dapat diselesaikan secara analitik.

INTEGRASI NUMERIK

- Fungsi yang dapat dihitung integralnya :

$$\int ax^n dx = \frac{ax^{n+1}}{n+1} + C$$

$$\int e^{ax} dx = \frac{e^{ax}}{a} + C$$

$$\int \sin(ax + b) dx = -\frac{1}{a} \cos(ax + b) + C$$

- Fungsi yang rumit misal :

$$\int \cos(ax + b) dx = \frac{1}{a} \sin(ax + b) + C$$

$$\int_0^2 \frac{2 + \cos(1 + x^{3/2})}{\sqrt{1 + 0.5 \sin x}} e^{0.5x} dx$$

$$\int \frac{1}{x} dx = \ln |x| + C$$

$$\int \ln |x| dx = x \ln |x| - x + C$$

INTEGRASI NUMERIK

- Perhitungan integral adalah perhitungan dasar yang digunakan dalam kalkulus, dalam banyak keperluan.
- digunakan untuk menghitung luas daerah yang dibatasi oleh fungsi $y = f(x)$ dan sumbu x .
- Penerapan integral : menghitung luas dan volume-volume benda putar

Dasar Pengintegralan Numerik

Penjumlahan berbobot dari nilai fungsi

$$\int_a^b f(x) dx \approx \sum_{i=0}^n c_i f(x_i)$$

$$= c_0 f(x_0) + c_1 f(x_1) + \dots + c_n f(x_n)$$

Dasar Pengintegralan Numerik

- Melakukan pengintegralan pada bagian-bagian kecil, seperti saat awal belajar integral – penjumlahan bagian-bagian.
- Metode Numerik hanya mencoba untuk lebih cepat dan lebih mendekati jawaban eksak.

Dasar Pengintegralan Numerik

Formula Newton-Cotes

- Berdasarkan pada

$$I = \int_a^b f(x) dx \cong \int_a^b f_n(x) dx$$

➤ Nilai hampiran $f(x)$ dengan polinomial

$$f_n(x) = a_0 + a_1x + \cdots + a_{n-1}x^{n-1} + a_nx^n$$

- $f_n(x)$ bisa fungsi linear
- $f_n(x)$ bisa fungsi kuadrat

(a)

(b)

- $f_n(x)$ bisa juga fungsi kubik atau polinomial yang lebih tinggi

(a)

(b)

➤ Polinomial dapat didasarkan pada data

INTEGRASI NUMERIK

- Luas daerah yang diarsir L dapat dihitung dengan :

- $L = \int_a^b f(x) dx$

Metode Integral Reimann

Metode Integral Reimann

- Luasan yang dibatasi $y = f(x)$ dan sumbu x
- Luasan dibagi menjadi N bagian pada range $x = [a, b]$
- Kemudian dihitung L_i : luas setiap persegi panjang dimana $L_i = f(x_i) \cdot \Delta x_i$

Metode Integral Reimann

- Luas keseluruhan adalah jumlah L_i dan dituliskan :

$$\begin{aligned} L &= L_0 + L_1 + L_2 + \dots + L_n \\ &= f(x_0)\Delta x_0 + f(x_1)\Delta x_1 + f(x_2)\Delta x_2 + \dots + f(x_n)\Delta x_n \\ &= \sum_{i=0}^n f(x_i)\Delta x_i \end{aligned}$$

- Dimana $\Delta x_0 = \Delta x_1 = \Delta x_2 = \dots = \Delta x_n = h$

- Didapat
$$\int_a^b f(x)dx = h \sum_{i=0}^n f(x_i)$$

Contoh

$$L = \int_0^1 x^2 dx$$

- Hitung luas yang dibatasi $y = x^2$ dan sumbu x untuk range $x = [0,1]$

Contoh

- Dengan mengambil $h=0.1$ maka diperoleh tabel :

x	0	0.1	0.2	0.3	0.4	0.5	0.6	0.7	0.8	0.9	1
f(x)	0	0.01	0.04	0.09	0.16	0.25	0.36	0.49	0.64	0.81	1

$$L = h \cdot \sum_{i=0}^{10} f(x_i)$$

$$= 0.1(0 + 0.01 + 0.04 + 0.09 + 0.16 + 0.25 + 0.36 + 0.49 + 0.64 + 0.81 + 1.00)$$

$$= (0.1)(3.85) = 0.385$$

- Secara kalkulus : $L = \int_0^1 x^2 dx = \frac{1}{3}x^3 \Big|_0^1 = 0.3333....$

- Terdapat kesalahan $e = 0.385 - 0.333$
= 0.052

Algoritma Metode Integral Reimann

- Definisikan fungsi $f(x)$
- Tentukan batas bawah dan batas atas integrasi
- Tentukan jumlah pembagi area N
- Hitung $h=(b-a)/N$
- Hitung
$$L = h \cdot \sum_{i=0}^N f(x_i)$$

Metode Integrasi Trapezoida

- Aproksimasi garis lurus (linier)

$$\int_a^b f(x) dx \approx \sum_{i=0}^1 c_i f(x_i) = c_0 f(x_0) + c_1 f(x_1)$$
$$= \frac{h}{2} [f(x_0) + f(x_1)]$$

Aturan Komposisi Trapesium

$$\begin{aligned}\int_a^b f(x)dx &= \int_{x_0}^{x_1} f(x)dx + \int_{x_1}^{x_2} f(x)dx + \cdots + \int_{x_{n-1}}^{x_n} f(x)dx \\ &= \frac{h}{2}[f(x_0) + f(x_1)] + \frac{h}{2}[f(x_1) + f(x_2)] + \cdots + \frac{h}{2}[f(x_{n-1}) + f(x_n)] \\ &= \frac{h}{2}[f(x_0) + 2f(x_1) + \cdots + 2f(x_i) + \cdots + 2f(x_{n-1}) + f(x_n)]\end{aligned}$$

$$h = \frac{b-a}{n}$$

Metode Integrasi Trapezoida

$$L_i = \frac{1}{2} (f(x_i) + f(x_{i+1})) \cdot \Delta x_i$$

atau

$$L_i = \frac{1}{2} (f_i + f_{i+1}) \cdot \Delta x_i$$

$$L = \sum_{i=0}^{n-1} L_i$$

$$L = \sum_{i=0}^{n-1} \frac{1}{2} h (f_i + f_{i+1}) = \frac{h}{2} (f_0 + 2f_1 + 2f_2 + \dots + 2f_{n-1} + f_n)$$

$$L = \frac{h}{2} \left(f_0 + 2 \sum_{i=1}^{n-1} f_i + f_n \right)$$

Algoritma Metode Integrasi Trapezoida

- Definisikan $y=f(x)$
- Tentukan batas bawah (a) dan batas atas integrasi (b)
- Tentukan jumlah pembagi n
- Hitung $h=(b-a)/n$
- Hitung

$$L = \frac{h}{2} \left(f_0 + 2 \sum_{i=1}^{n-1} f_i + f_n \right)$$

Aturan Simpson 1/3

Aproksimasi dengan fungsi parabola

$$\int_a^b f(x)dx \approx \sum_{i=0}^2 c_i f(x_i) = c_0 f(x_0) + c_1 f(x_1) + c_2 f(x_2)$$
$$= \frac{h}{3} [f(x_0) + 4f(x_1) + f(x_2)]$$

Aturan Simpson 1/3

$$L(x) = \frac{(x - x_1)(x - x_2)}{(x_0 - x_1)(x_0 - x_2)} f(x_0) + \frac{(x - x_0)(x - x_2)}{(x_1 - x_0)(x_1 - x_2)} f(x_1) + \frac{(x - x_0)(x - x_1)}{(x_2 - x_0)(x_2 - x_1)} f(x_2)$$

$$\text{let } x_0 = a, x_2 = b, x_1 = \frac{a+b}{2}$$

$$h = \frac{b-a}{2}, \xi = \frac{x - x_1}{h}, d\xi = \frac{dx}{h}$$

$$\begin{cases} x = x_0 \Rightarrow \xi = -1 \\ x = x_1 \Rightarrow \xi = 0 \\ x = x_2 \Rightarrow \xi = 1 \end{cases}$$

$$L(\xi) = \frac{\xi(\xi - 1)}{2} f(x_0) + (1 - \xi^2) f(x_1) + \frac{\xi(\xi + 1)}{2} f(x_2)$$

Aturan Simpson 1/3

$$L(\xi) = \frac{\xi(\xi-1)}{2} f(x_0) + (1-\xi^2) f(x_1) + \frac{\xi(\xi+1)}{2} f(x_2)$$

$$\begin{aligned} \int_a^b f(x) dx &\approx h \int_{-1}^1 L(\xi) d\xi = f(x_0) \frac{h}{2} \int_{-1}^1 \xi(\xi-1) d\xi \\ &\quad + f(x_1) h \int_0^1 (1-\xi^2) d\xi + f(x_2) \frac{h}{2} \int_{-1}^1 \xi(\xi+1) d\xi \\ &= f(x_0) \frac{h}{2} \left(\frac{\xi^3}{3} - \frac{\xi^2}{2} \right) \Big|_{-1}^1 + f(x_1) h \left(\xi - \frac{\xi^3}{3} \right) \Big|_{-1}^1 \\ &\quad + f(x_2) \frac{h}{2} \left(\frac{\xi^3}{3} + \frac{\xi^2}{2} \right) \Big|_{-1}^1 \end{aligned}$$

$$\int_a^b f(x) dx = \frac{h}{3} [f(x_0) + 4f(x_1) + f(x_2)]$$

Aturan Komposisi Simpson

Metode Integrasi Simpson

- Dengan menggunakan aturan simpson, luas dari daerah yang dibatasi fungsi $y=f(x)$ dan sumbu X dapat dihitung sebagai berikut:

$$N = 0 - n$$

$$L = L1 + L3 + L5 + \dots + Ln$$

$$L = \frac{h}{3}(f_0 + 2f_1) + \frac{h}{3}(2f_1 + f_2) + \frac{h}{3}(f_2 + 2f_3) + \frac{h}{3}(2f_3 + f_4) + \dots + \frac{h}{3}(f_{n-2} + 2f_{n-1}) + \frac{h}{3}(2f_{n-1} + f_n)$$

- atau dapat dituliskan dengan:

$$L = \frac{h}{3} \left(f_0 + 4 \sum_{i \text{ ganjil}} f_i + 2 \sum_{i \text{ genap}} f_i + f_n \right)$$

Cara II

(Buku Rinaldi Munir)

- Polinom interpolasi Newton-Gregory derajat 2 yang melalui ketiga titik tsb

$$p_2x = f(x_0) + \frac{x}{h} \Delta f(x_0) + \frac{x(x-h)}{2!h^2} \Delta^2 f(x_0) = f_0 + \frac{x}{h} f_0 + \frac{x(x-h)}{2!h^2} \Delta^2 f_0$$

Cara II

(Buku Rinaldi Munir)

- Integrasikan $p_2(x)$ pd selang $[0, 2h]$

$$L = \int_0^{2h} f(x) dx = \int_0^{2h} p_2 x dx$$

$$L = \int_0^{2h} \left(f_0 + \frac{x}{h} \Delta f_0 + \frac{x(x-h)}{2!h^2} \Delta^2 f_0 \right) dx$$

$$L = f_0 x + \frac{x^2}{2h} \Delta f_0 + \left(\frac{x^3}{6h^2} - \frac{x^2}{4h^2} \right) \Delta^2 f_0 \Big|_{x=0}^{x=2h}$$

$$L = 2hf_0 x + \frac{4h^2}{2h} \Delta f_0 + \left(\frac{8h^3}{6h^2} - \frac{4h^2}{4h} \right) \Delta^2 f_0$$

$$L = 2hf_0 x + 2h\Delta f_0 + \left(\frac{4h}{3} - h \right) \Delta^2 f_0$$

$$L = 2hf_0 x + 2h\Delta f_0 + \frac{h}{3} \Delta^2 f_0$$

Cara II

(Buku Rinaldi Munir)

- Mengingat $\Delta f_0 = f_1 - f_0$

$$\Delta^2 f_0 = \Delta f_1 - \Delta f_0 = (f_2 - f_1) - (f_1 - f_0) = f_2 - 2f_1 + f_0$$

- Maka selanjutnya

$$L = 2hf_0x + 2h(f_1 - f_0) + \frac{h}{3}(f_2 - 2f_1 + f_0)$$

$$L = 2hf_0x + 2hf_1 - 2hf_0 + \frac{h}{3}f_2 - \frac{2h}{3}f_1 + \frac{h}{3}f_0$$

$$L = \frac{h}{3}f_0 + \frac{4h}{3}f_1 + \frac{h}{3}f_2$$

$$L = \frac{h}{3}(f_0 + 4f_1 + f_2)$$

Aturan Simpson 3/8

Aproksimasi dengan fungsi kubik

$$\int_a^b f(x) dx \approx \sum_{i=0}^3 c_i f(x_i) = c_0 f(x_0) + c_1 f(x_1) + c_2 f(x_2) + c_3 f(x_3)$$
$$= \frac{3h}{8} [f(x_0) + 3f(x_1) + 3f(x_2) + f(x_3)]$$

Aturan Simpson 3/8

$$L(x) = \frac{(x-x_1)(x-x_2)(x-x_3)}{(x_0-x_1)(x_0-x_2)(x_0-x_3)} f(x_0) + \frac{(x-x_0)(x-x_2)(x-x_3)}{(x_1-x_0)(x_1-x_2)(x_1-x_3)} f(x_1) \\ + \frac{(x-x_0)(x-x_1)(x-x_3)}{(x_2-x_0)(x_2-x_1)(x_2-x_3)} f(x_2) + \frac{(x-x_0)(x-x_1)(x-x_2)}{(x_3-x_0)(x_3-x_1)(x_3-x_2)} f(x_3)$$

$$\int_a^b f(x)dx \approx \int_a^b L(x)dx ; \quad h = \frac{b-a}{3} \\ = \frac{3h}{8} [f(x_0) + 3f(x_1) + 3f(x_2) + f(x_3)]$$

➤ **Error Pemenggalan**

$$E_t = -\frac{3}{80} h^5 f^{(4)}(\xi) = -\frac{(b-a)^5}{6480} f^{(4)}(\xi) ; \quad h = \frac{b-a}{3}$$

Aturan Simpson 3/8

- Sedangkan untuk kaidah Simpson 3/8 gabungan adalah:

$$\int_a^b f(x) dx \approx \frac{3h}{8} (f_0 + 3f_1 + 3f_2 + 2f_3 + 3f_4 + 3f_5 + 2f_6 + 3f_7 + 3f_8 + 2f_9 + \dots \\ + 2f_{n-3} + 3f_{n-2} + 3f_{n-1} + f_n)$$

Tugas

Selesaikan soal di bawah ini dengan menggunakan metode integrasi Riemann, Trapezoid, Simpson 1/3 dan Simpson 3/8. Hitung errornya terhadap hasil integral analitik:

1. $\int_0^1 \frac{1}{(2x-1)^3} dx =$

2. $\int_0^1 (2x + 1)(x - 5) dx =$

3. $\int_1^3 (5x^2 - 6x + \frac{12}{x^2}) dx =$

4. $\int_{-1}^2 (2x^2 - 3)^2 dx =$
