

15 Million BSI Customer Data Allegedly Leaked, Cyber Expert: Beware of Phishing Attacks on Account Owners

15 million BSI customer data was leaked which included customer personal data, the total data stolen reached 1.5 TB. Contact numbers of people who had been contacted by BSI were also leaked in the 10 GB call_history.csv database.

The cyber community revealed that BSI was suspected of being hit by a ransomware attack or hacking with blackmail carried out by Lockbit actors.

The LockBit attack occurred on May 8, 2023. After that, LockBit gave a deadline until May 15, 2023 for BSI to pay the ransom. After the deadline passed, LockBit claimed to have already distributed the stolen data.

The main motive of LockBit is to extort BSI by demanding a ransom of Rp 295.6 billion so that they do not distribute the customer data they stole. When the negotiation failed, LockBit then decided to distribute the data.

LockBit carried out a ransomware attack that disrupted BSI's services. After that, they claimed to have stolen customer personal data, employee data, financial and legal documents from BSI.

Overall, this case involves a ransomware attack by the LockBit group on BSI, customer data theft, and extortion attempts by demanding a ransom, which was then followed by data distribution when the negotiations failed.
